

Sage 100 ERP

TimeCard*

More than an automated time card system, the TimeCard module for Sage 100 ERP (formerly Sage ERP MAS 90 and 200) is a powerful and flexible addition to the Payroll and Job Cost modules. Enter employees' time card data on any schedule desired, then hold this information until you are ready to run your next payroll. The Certified Payroll Report feature allows you to flag labor codes and job numbers, then generate reports for submission to most government agencies. TimeCard also provides you with a convenient time clock component—adding even more functionality and flexibility to your Sage 100 ERP solution.

Use this module to enter your employees' time card data on any schedule desired (daily, weekly, and so on) without affecting the payroll data entry files. When you are ready to run your payroll for the pay period, the entries are transferred to Payroll Data Entry from TimeCard automatically. You can even give an employee a raise in the middle of a pay period without issue. TimeCard stamps each entry with the employee's current pay rate and maintains the old rate for existing entries, then applies the new rate to the next entry.

When used in conjunction with the Job Cost module, a job number and cost code may be specified and information may be posted to Job Cost independently from Payroll. This provides you with up-to-date job cost information without having to wait for the next pay cycle.

BENEFITS

- Secure access to protect sensitive data
- Track vacation, sick leave, and more
- Enter memos to be printed on the TimeCard Report
- Tight integration with Payroll
- Time clock time entry program
- Updates job cost labor without running payroll
- User-defined shifts

REPORTS

- Certified Payroll Report
- Timecard History Report
- Hourly and Salary Tracking Report
- Time and Attendance Report

The screenshot shows the 'TimeCard Entry and Edit' window. At the top, it displays 'Employee No.' as 01-0001000, 'Date Worked' as 12/04/2003, and the employee name 'Emerson, David'. The 'Sequence No.' is 001. Below this, there are tabs for '1. Main' and '2. Additional'. The main section contains several input fields: 'Labor Code' (0000002, Journeyman), 'Earnings Code' (01, REGULAR), 'State' (CA, Local), 'Dept' (01), and 'W/C Code' (ALL, All Employees). Below these are 'Job Number' (EEC2140, Saddleback-Hospital Remodel) and 'Cost Code' (100-010-000, Underground Work - Digging). The bottom section has 'Time In', 'Time Out', 'Elapsed' (.00), 'Hours Worked (Decimal)' (8.00), 'Hours Worked (Clock)' (8.00), 'Rate' (25.0000), and 'Amount' (200.00). At the bottom of the window are navigation buttons: 'Accept', 'Cancel', 'Delete', and a help icon.

*This module is compatible with Sage 100 Standard and Advanced ERP.

“We used to get these [labor] reports weekly—too late to do anything about them. Now if we had a labor problem yesterday, we can solve it today.”

Dennis Adcock
Controller
Standard Candy

Edition

Compatible with Sage 100 Standard and Advanced ERP

Features

Certified Payroll Reports

When you integrate TimeCard with the Job Cost module, you can generate certified payroll reports suitable for submission to many governmental agencies. This virtually eliminates the manual reporting process and allows you to flag labor codes and job numbers to participate in certified payroll reporting.

Simultaneous Data Entry

Multiple operators can perform data entry (with optional password control) at the same time, enabling you to increase efficiency and provide tremendous convenience to your payroll staff.

Integration With Payroll Employee Master File

TimeCard enables you to pull employee defaults for earnings codes, labor codes, workers compensation, state worked, department worked, and more, from the Payroll Employee Masterfile during data entry.

Track by Job Number and Cost Code

When used in conjunction with the Job Cost module, you can track up-to-date costs associated with a specific job without having to wait until the end of the pay cycle, so job billings don't have to wait until after payday.

Smart Time Fields

These fields allow you to record time-in and time-out, and track elapsed time automatically, deducting for break and lunch times where appropriate.

TimeClock

Automatically collect attendance data for use in comprehensive time and attendance reporting. TimeClock also allows employees to change job numbers without having to punch out, so you can accurately track job costs. TimeClock works without special hardware—employees punch in and out at any regular computer workstation on the network.

Overtime Tracking

The Approaching Overtime Report provided in TimeClock enables you to manage payroll by monitoring those employees who are approaching overtime.

Security

Employees can only punch in or punch out if the correct password is entered.

TimeClock Convenience Features

- Punch out of one department and in to another
- Automatically record days absent
- Automatically deduct lunch/break times
- Automatic punch out if employee forgets to do so
- Lunch schedules
- Shift schedules
- Attendance codes
- Automatic break rules

About Sage

Sage is a leading global supplier of business management software and services for small and mid-sized businesses. The Sage Group plc, formed in 1981, was floated on the London Stock Exchange in 1989 and now employs more than 12,300 people and supports more than 6 million customers worldwide.
